Institut Teknologi Bandung
2019

Computer Vision

- *Computer vision* merupakan proses otomatis yang mengintegrasikan sejumlah besar proses untuk persepsi visual, seperti akuisisi citra, pengolahan citra, klasifikasi, pengenalan (*recognition*), dan membuat keputusan.
- *Computer vision* terdiri dari teknik-teknik untuk mengestimasi ciri-ciri objek di dalam citra, pengukuran ciri yang berkaitan dengan geometri objek, dan menginterpretasi informasi geometri tersebut.
- *Vision = Geometry + Measurement + Interpretation*

- Pada hakikatnya, *computer vision* mencoba meniru cara kerja sistem visual manusia (*human vision*).
- *Human vision* sesungguhnya sangat kompleks. Manusia melihat objek dengan indera penglihatan (mata), lalu citra objek diteruskan ke otak untuk diinterpretasi sehingga manusia mengerti objek apa yang tampak dalam pandangan matanya.
- Hasil interpretasi ini mungkin digunakan untuk pengambilan keputusan (misalnya menghindar kalau melihat mobil melaju di depan).

- Proses-proses di dalam *computer vision* dapat dibagi menjadi tiga aktivitas:
 1. Memperoleh atau mengakuisisi citra digital.
 2. Melakukan teknik komputasi untuk memproses atau memodifikasi data citra (operasi-operasi pengolahan citra).
 3. Menganalisis dan menginterpretasi citra dan menggunakan hasil pemrosesan untuk tujuan tertentu, misalnya memandu robot, mengontrol peralatan, memantau proses manufaktur, dan lain-lain.

- Proses-proses di dalam *computer vision* dalam hirarkhi sebagai berikut :

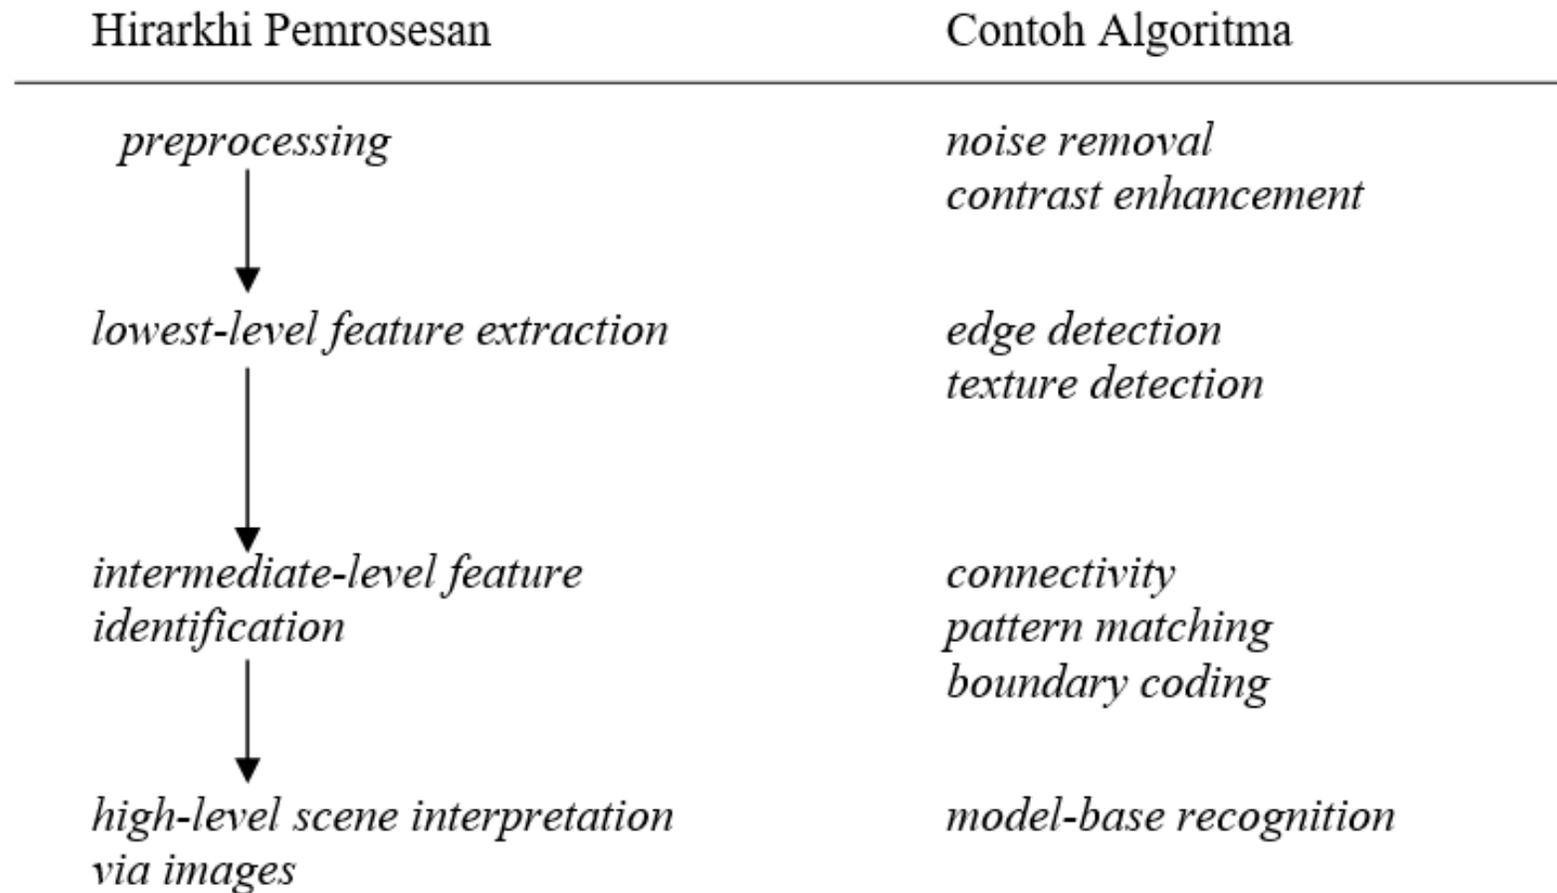

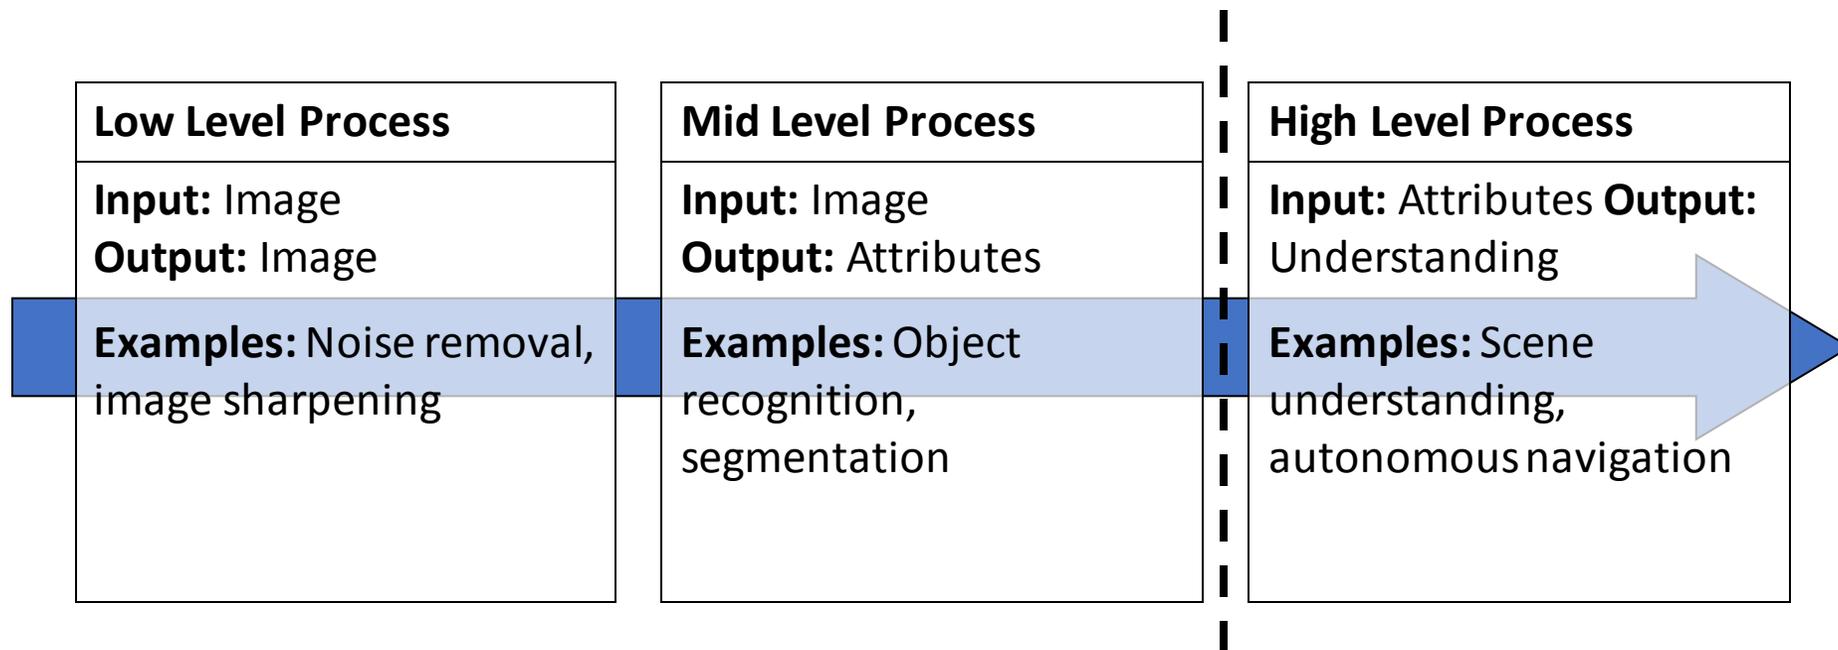

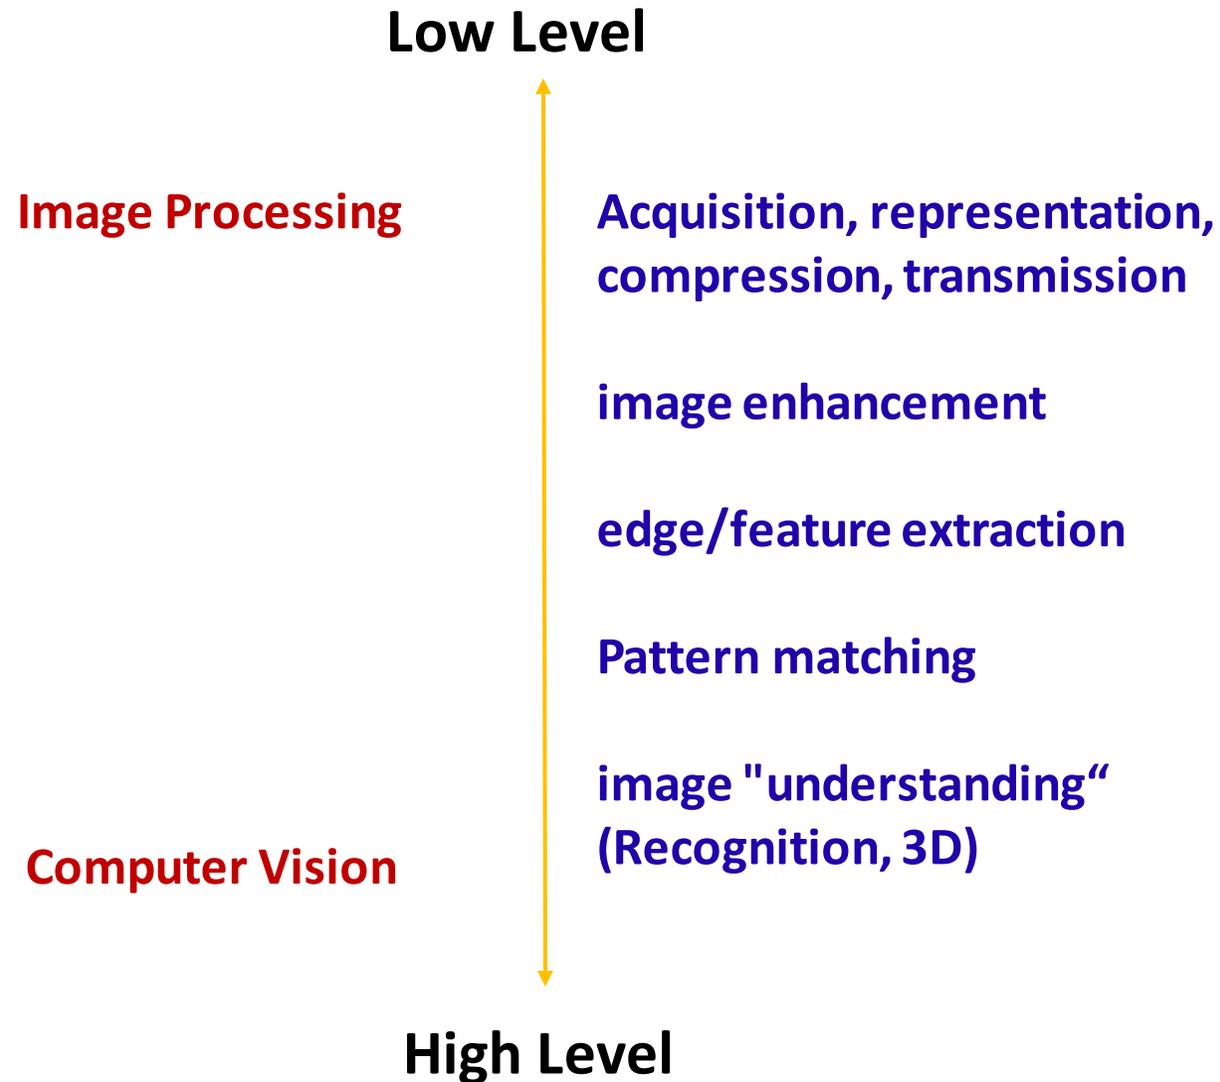

Image Processing → Computer Vision

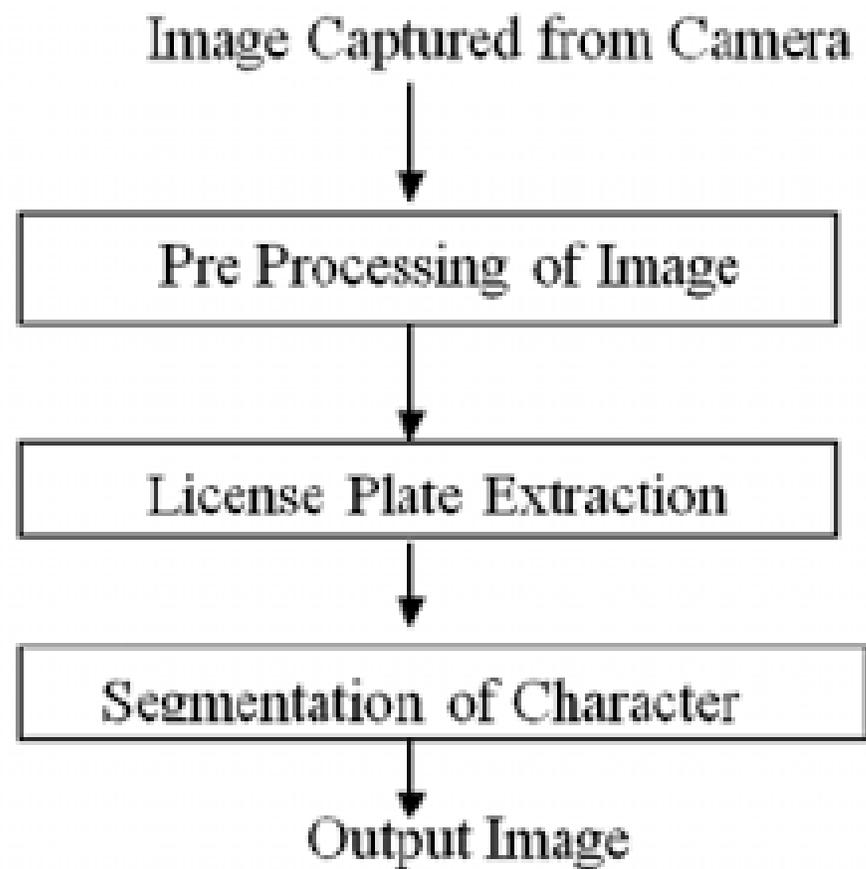

- Rangkaian kesatuan dari *image processing* ke *computer vision* dapat dipecah menjadi low-, mid- dan high-level processes

Human tracking

Citra Uji Standard

- Terdapat sejumlah citra yang sering dipakai sebagai citra uji di dalam pengolahan citra atau *computer vision*.
- Citra-citra tersebut sering disebut sebagai *standard test image*, baik citra *grayscale* maupun citra berwarna.
- Umumnya citra uji berukuran persegi ($N \times N$) untuk memudahkan beberapa operasi pengolahan citra yang mengasumsikan citra masukan sebagai citra persegi.
- Empat citra uji standard yang populer dan digunakan secara luas adalah citra *Lena*, *mandrill*, *camera*, dan *pepper*.
- Koleksi citra uji dapat dilihat di laman situs web saya:
<http://informatika.stei.itb.ac.id/~rinaldi.munir/Koleksi/Citra%20Uji/CitraUji.htm>

Lena, 256 × 256

Peppers 512 × 512

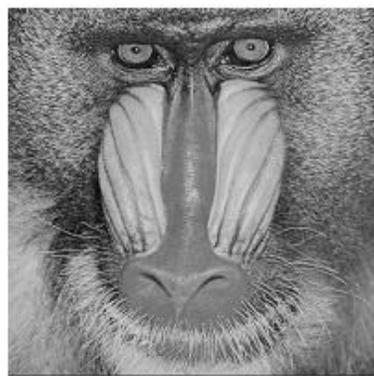

Zelda 512 × 512

Bird 256 × 256

Camera 256 × 256

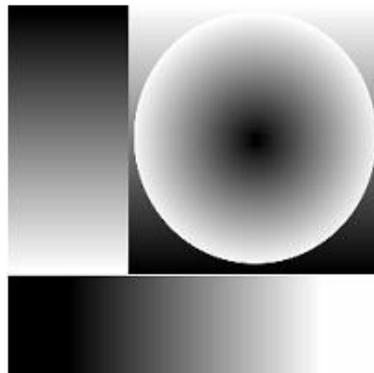

Mandrill 512 × 512

Barbara 512 × 512

Boat 512 × 512

Slope 256 × 256

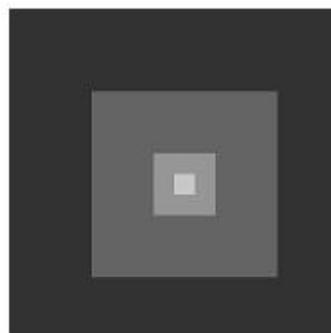

San Fransisco 256 × 256

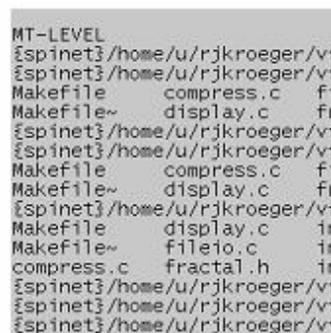

Collie 256 × 256

Circle 256 × 256

Squares 256 × 256

Text 256 × 256

Mountain 640 × 480

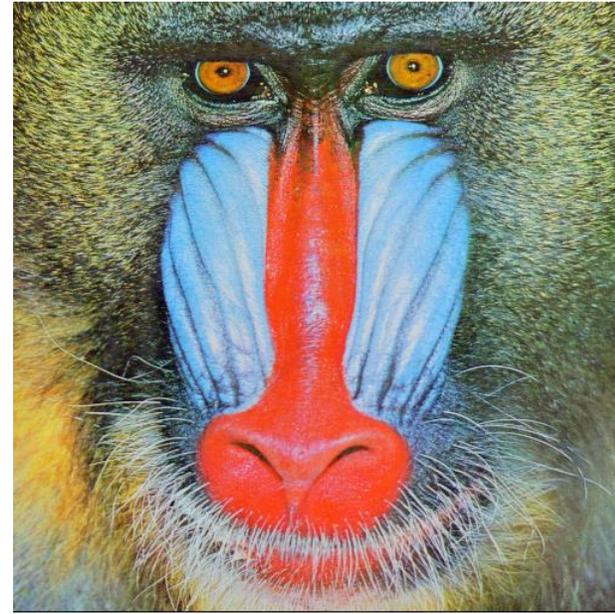

Goldhill 512 × 512

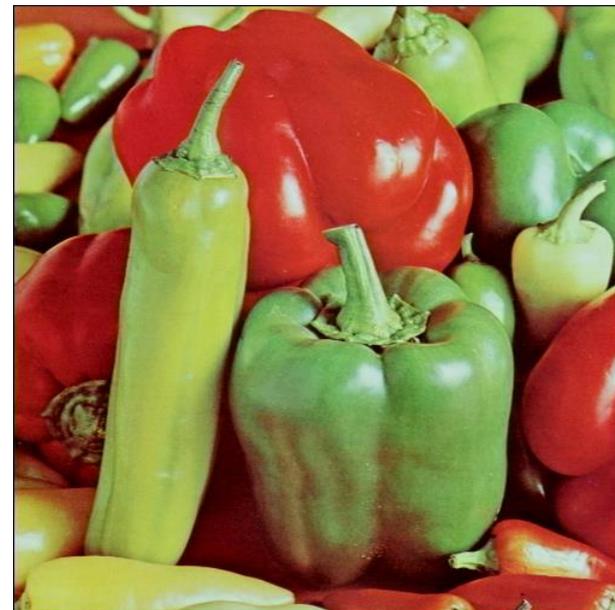

Eltoro 512 × 512

Girl 256 × 256

Citra uji lainnya:

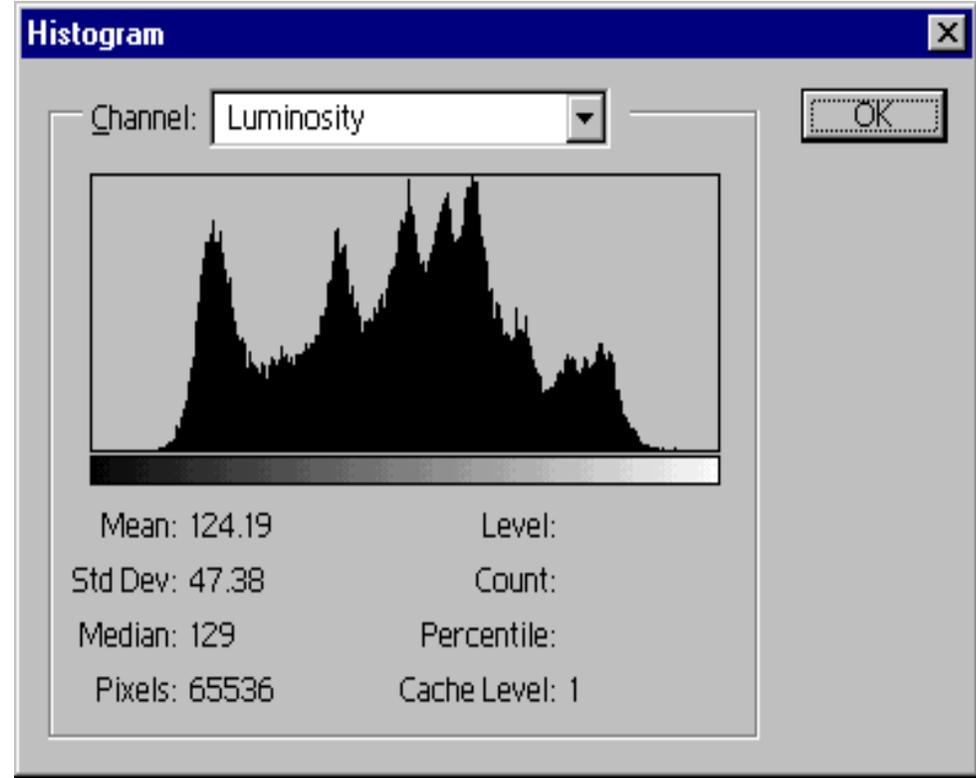

Empat citra populer dalam bidang *image processing*

Sejarah Citra Lena

- **Lenna** atau **Lena** adalah nama citra uji standard yang digunakan secara luas di dalam bidang pengolahan citra sejak tahun 1973.
- Lena adalah citra seorang model Swedia bernama Lena Söderberg, yang dipotong dari majalah *Playboy*.
- Foto Lena dari majalah tersebut dipindai oleh Alexander Sawchuk, dia memerlukan foto wajah untuk ditampilkan di dalam sebuah artikel ilmiahnya di sebuah konferensi IEEE.
- Alasan penggunaan citra Lena sebagai citra uji adalah karena citra ini memiliki detail yang bagus, tekstur, dan bayangan, tetapi yang paling penting adalah nilai-nilai *pixel*-nya tersebar secara merata (histogram).
- Tidak dipungkiri juga alasan karena ia seorang wanita cantik, seorang model, dan seorang artis.

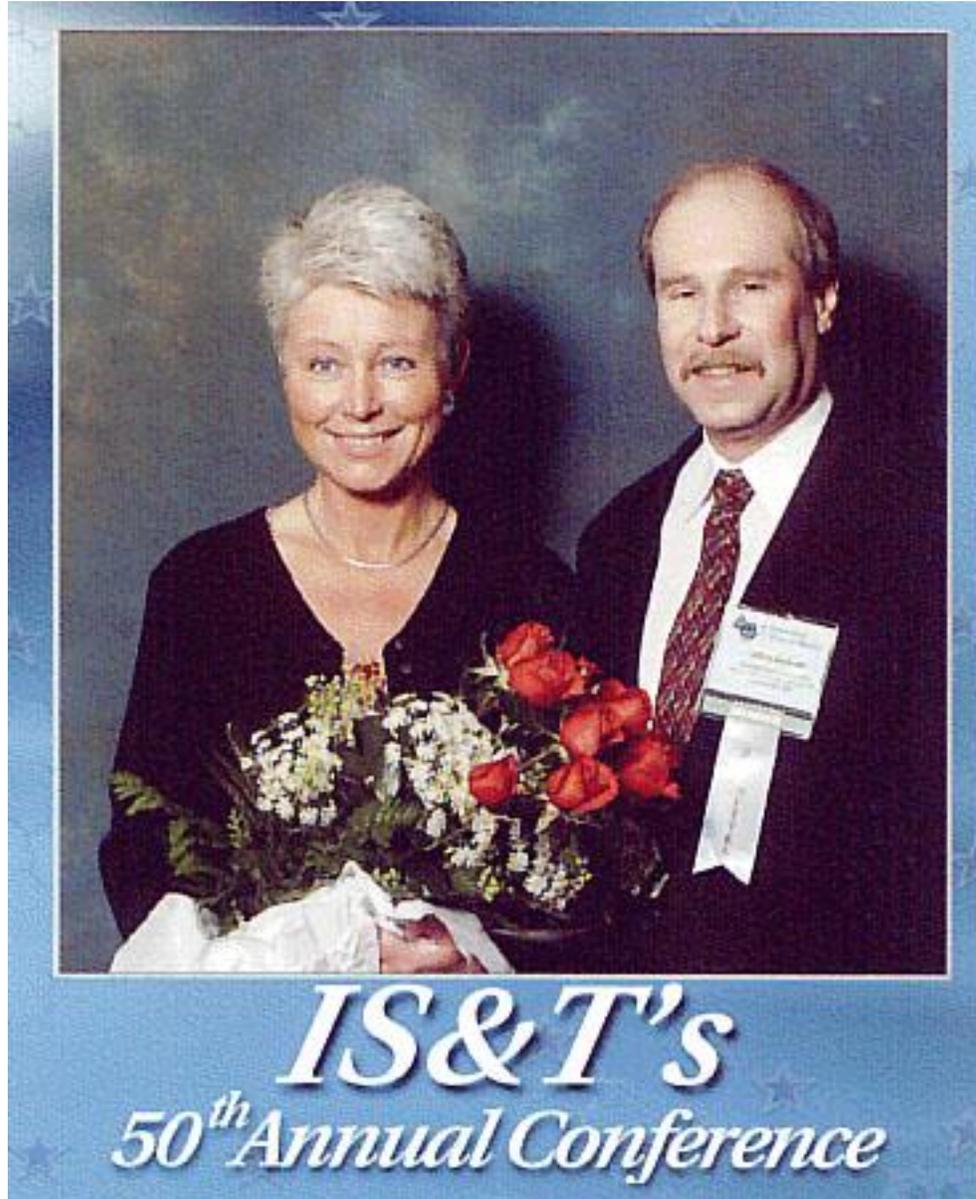

- Sejarah pertama kali citra Lenna dipakai sebagai citra uji ditulis sebagai berikut:

Alexander Sawchuk estimates that it was in June or July of 1973 when he, then an assistant professor of electrical engineering at the [University of Southern California](#) Signal and Image Processing Institute (SIPI), along with a graduate student and the SIPI lab manager, was hurriedly searching the lab for a good image to scan for a colleague's conference paper. They got tired of their stock of usual test images, dull stuff dating back to television standards work in the early 1960s. They wanted something glossy to ensure good output dynamic range, and they wanted a human face. Just then, somebody happened to walk in with a recent issue of *Playboy*.

The engineers tore away the top third of the centerfold so they could wrap it around the drum of their Muirhead wirephoto scanner, which they had outfitted with analog-to-digital converters (one each for the red, green, and blue channels) and a [Hewlett Packard 2100](#) minicomputer. The Muirhead had a fixed resolution of 100 lines per inch and the engineers wanted a 512×512 image, so they limited the scan to the top 5.12 inches of the picture, effectively cropping it at the subject's shoulders.

Lena Söderberg tahun 1997:

Currently, Lenna lives near Stockholm and works for a government agency supervising handicapped employees archiving data using, appropriately, computers and scanners.

Lena saat ini:

I discovered that the last time she'd appeared in public was in 2015, as a "special guest" at an image processing industry conference in Quebec City.

"I'm just surprised that it never ends," Forsen says about her unusual fame.
