

IF2211 Strategi Algoritma
(Semester II Tahun Ajaran 2024/2025)

Informasi ringkas perkuliahan

<i>Bobot SKS</i>	: 3
<i>Tims dosen</i>	: Dr. Nur Ulfa Maulidevi (K1) Dr. Rinaldi (K2) – Koordinator Monterico Adrian, M.T (K3)
<i>E-mail</i>	: ulfa@staff.stei.itb.ac.id , ulfa@informatika.org rinaldi@staff.stei.itb.ac.id , rinaldi@informatika.org montericoadrian@itb.ac.id
<i>URL kuliah</i>	: http://informatika.stei.itb.ac.id/~rinaldi.munir Edunex (https://edunex.itb.ac.id/)
<i>Asisten</i>	: 2 orang per kelas
<i>Jadwal kuliah</i>	: Senin, 15.00 – 17.00 Rabu, 15.00 – 16.00

Tujuan Umum Kuliah:

Mahasiswa memahami beberapa strategi yang digunakan dalam memecahkan persoalan secara sangkil sesuai dengan karakteristik persoalan tersebut.

Tujuan Khusus:

Mahasiswa mampu:

1. Memilih strategi yang tepat untuk menyelesaikan suatu persoalan.
2. Membuat program/aplikasi untuk menyelesaikan persoalan dengan strategi yang tepat.

Capaian Kuliah (Student Outcome) berdasarkan ABET

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Apply computer science theory and software development fundamentals to produce computing-based solutions.

Prasyarat Kuliah:

1. IF2120 Matematika Diskrit
2. IF2110 Algoritma dan Struktur Data

Pokok Bahasan:

1. Pengantar Strategi Algoritma
3. Algoritma *brute force*
4. Algoritma *greedy*
5. Algoritma *divide and conquer*
6. Algoritma *decrease and conquer*
6. *DFS* dan *BFS*
7. Algoritma *backtracking*
8. Algoritma *branch and bound*
9. Algoritma *A**, *Best First Search*, dan *UCS*
10. Program dinamis (*dynamic programming*)
11. *String matching + regular expression (Regex)*
12. Teori P, NP, dan NP-*Completes*

Penilaian :

1. Ujian Tengah Semester (UTS) – 1 kali
2. Ujian Akhir Semester (UAS) – 1 kali
3. Tugas Besar (Tubes) – 3 buah, per kelompok
4. Tugas Kecil (Tucil) – 3 buah, per orang/2 orang
4. Makalah (di akhir semester) – 1 buah
5. Kehadiran

Tugas pemrograman adalah tugas besar berkelompok. Program dikembangkan dengan menggunakan kakas pemrograman berbasis GUI (Graphical User Interface). Tugas pertama direncanakan menggunakan kakas pemrograman dengan GUI menggunakan bahasa C++ (misalnya Visual C++). Tugas kedua menggunakan C# dengan kakas Visual Studio atau yang sejenis, dan tugas ketiga menggunakan Java (NetBeans, Eclipse) + PHP. Tugas Kecil adalah tugas perorangan atau per-dua orang dengan bahasa pemrograman yang ditentukan (C, C++, Java, Python, Golang, Rust, dll).

Perkiraan batas-batas nilai untuk perhitungan indeks (tidak tetap, bisa berubah)

- Nilai Akhir ≥ 81 , indeks = A
- $76 \leq \text{Nilai Akhir} < 81$, indeks = AB
- $71 \leq \text{Nilai Akhir} < 76$, indeks = B
- $65 \leq \text{Nilai Akhir} < 71$, indeks = BC
- $55 \leq \text{Nilai Akhir} < 65$, indeks = C
- $45 \leq \text{Nilai Akhir} < 55$, indeks = D
- Nilai Akhir 45, indeks = E
